Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:30:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:30:27

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:20:27

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

Net neutrality rules are important to all of us. They protect us from a corporate takeover of the Internet and foster diversity, equality, competition and innovation.

It is evident that if 'fast lanes' are created for the highest bidders, then everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements to survive next to dominant players like Google and Facebook.

I urge you to close all loopholes in the current proposals that would allow service providers to act as gatekeepers and prioritise certain content, through preferential treatment, "zero-rating" or class-based traffic management.

In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's the turn of the EU, committed as it is to freedom of services, to follow their example and protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

Please don't allow the vested interest of big companies to spoil the freedom of the internet for normal people.

- Net neutrality rules protect all of us allow a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

I would add that it is because of this sort of legislation that protects the wealthiest in society at the expense of the less well off that the British people voted to get out of the EU. Wake up, others will leave soon if you don't change your attitude. Of course, it could be that world domination by the wealthiest is your aim!

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:20:18

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:10:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:10:25

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

Net neutrality rules protect everyone from a corporate, monopolistic takeover of the Internet, as they foster diversity, equality, competition and innovation.

If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination - as that is what it is - would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.

I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.

You will be aware that, in Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 19:10:24

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:50:14

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:40:31

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:40:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:40:26

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

<https://avaazimages.avaaz.org/GuidelinePolicyAnalysisPdf.pdf>

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

I strongly feel that net neutrality is a founding principal that we should support as a democratic ideal. The abuse of power in creating fast lanes for paying companies is unconscionable and inexcusable. Please know that I will not support this in any way and I hope you will take this into account when making your decision as a representative of the public. Please keep those who you represent in mind as you go forward to make your final decisions on this subject.

With many thanks for the job you do,
Heather Ni,
Howald, Luxembourg

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

<https://avaazimages.avaaz.org/GuidelinePolicyAnalysisPdf.pdf>

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

We are all citizens of the world and the internet connects all in a global way. Therefore it is most important that everyone, and not just the powerful few, have proper access to the internet and have a good internet connection. Indeed, the internet is now such a widely used tool of communication that it should be seen as a democratic right of every citizen to have proper and equal access to the internet.

Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.

If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'.

This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.

I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:10:31

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Our world is becoming closer and more interconnected through free expression and access to each others' thoughts and opinions. Please do all you can to support everyone's right to freely communicate, and prevent a power bias towards large corporations from occurring.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.

If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'.

This is discrimination and would make it harder for independent media, start-ups and citizen movements to survive next to dominant players like Google and Facebook.

I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment.

In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

<https://avaazimages.avaaz.org/GuidelinePolicyAnalysisPdf.pdf>

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

From: [John du Feu](#)
To: [NN-Consultation](#)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:00:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

I strongly believe in the good that has been achieved by the open nature the internet has always had up to this point. This includes:

a renewed approach to democracy through open discussion and, where necessary, protest for everyone with access;
commercial and social change as a result of allowing remarkable 21st century success stories like Facebook, Google, Twitter, Amazon and many others to make a start and to grow on an open internet;
improvement in media communication through the inclusion of internet feeds into live TV and radio through platforms such as Skype;
improved personal communication for millions of ordinary people for whom the internet is a rescue from isolation.

While we realise that none of these things would be made entirely impossible by a two-speed internet, they would most certainly be made far more difficult to sustain for most platforms and most participants. The resulting loss to society, in its present and even more in its future development, would be a tragic way to assist the profit margins of the now-established commercial internet interests that are fighting the imposition of strong net neutrality rules. History demonstrates that without the input of creative individuals and dedicated citizen platforms like Wikipedia, for instance, the internet would be deprived of its capacity for renewal and would stagnate. For this reason and for those stated above, we request that you consider these points in arriving at your decision.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.

From: [Douglas Park](#)
To: [NN-Consultation](#)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 18:00:26

The following needs consideration as regards the BEREC net neutrality guidelines creation etc:

Diversity, equality, competition and innovation are protected against corporate internet takeover by net neutrality rules.

The majority of US (yes, we, the 99%, people, etc) will end in the slow lane if highest bidders are allowed fast lanes. Independent media, start-ups and citizen movements etc would face near impossibility against Google, Facebook and others.

So there needs to be an end of every loophole in present plans enabling service providers to bias some content and enact gatekeeping, by “zero-rating” or class-based traffic management being prioritised.

Brazil, the US, India and elsewhere all have regulators with strong net neutrality rules due to incredible public feedback to their consultations. So Europe should defend internet openness and democracy.

Therefor, current draft guidelines and the entire process need policy analysis applied to them:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

<https://avaazimages.avaaz.org/GuidelinePolicyAnalysisPdf.pdf>

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

Berners Lee created the internet not for profit but for the equal use by all who had a need of it. He did not become a billionaire from the exploitation of it and it is morally wrong that his altruism is to be abused by those that did. The internet is for the benefit of everyone equally, and not for the multinationals to exploit at everyone elses expence.

- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:48:40

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet

access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single

market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring

paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,

A concerned stakeholder

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:46:58

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Felix Emmert, B.Sc. (TUM)

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with

the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:40:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

I am very concerned that the internet remain cheap, open, and on a level playing field for all comers. Only this will facilitate the free interchange of ideas that our society and economy need.

- Net neutrality rules protect all of us from a takeover of the Internet by large and established players, and foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.

Date: 16 July 2016 17:30:33

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

The free and open Internet is one of the greatest achievements of the late 20th century. We must not allow this global equality to be undermined by corporations wanting to increase their already considerable profits, at the expense of the poor, small businesses, charities and citizen groups.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:30:31

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Date: 16 July 2016 17:30:28

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:30:27

Dear Sir / Madam,

I write concerning the future of the internet in Europe and the importance of rules of net neutrality. I understand that Brazil, India and the USA have adopted strong net neutrality rules. I hope to see an open and democratic internet in Europe.

Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.

If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.

Please ensure the closure of all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.

I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:30:22

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:30:19

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:20:23

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:10:35

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

From: [Alexander Scott](#)
To: [NN-Consultation](#)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:00:30

Dear Sir / Madam,

Please take this Stakeholder comment regarding the creation of BEREC net neutrality guidelines into consideration.

- Net neutrality rules protect all of us - in all jurisdictions - from corporate control of the Internet by fostering diversity, equality, competition, and innovation. The globally-connected nature of the Internet means that partiality in any geographical or political region risks degrading the entire network.
- If we allow 'fast lanes' for the highest bidder, all other traffic is implicitly consigned to the 'slow lane'. This discrimination would make it harder for independent media, start-ups, and citizen movements to survive next to already dominant players like Google and Facebook, or backers with deep pockets such as the Murdoch media empire.
- I urge you to close all known or likely loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, whether through explicitly preferential treatment, "zero-rating", or class-based traffic management. Legislation which only affects those who cannot afford the best lawyers is worse than useless.
- In Brazil, the USA, and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to play its part in protecting an open Internet.

For this reason, I urge you to amend the current draft guidelines. I believe that the policy analysis in the following link sets out a better course of action than is currently planned:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 July 2016 17:00:29

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:
