Date: 15 July 2016 10:42:23

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

From: [Hubert Zenner](#)
To: [NN-Consultation; allow-submission-to-berec@consultation.savetheinternet.eu](mailto:allow-submission-to-berec@consultation.savetheinternet.eu)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:39:43

Dear Sir or Madam,
Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Hubert Zenner

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:32:46

Dear Sir / Madam,

I am very concerned about this move. There are clear warnings about what will happen if we give in to this industry-driven push. It is not good for our democratic rights and freedoms and could lead to a worse internet and media situation than we've see so far in Brexit Britain, where corporate media has dominated the agenda. We need all voices to be heard.

Please take the below comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:31:12

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:30:52

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:30:36

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:30:03

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:27:09

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:26:49

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

To: [NN-Consultation](#)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:24:59

Dear Sir / Madam,

The internet and the world wide web were created by public money investing in long term research.

Companies that contributed nothing to it and who now contribute nothing to it - often dodging the very tax that paid for the internet - now want to profit from it even more than they are already doing.

It is hardly surprising there is a disconnect between politics and people, across the globe.

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:29

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Thomas Frank

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services (“services other than internet access services”) under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the “normal” Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in

line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word “other” before “end-users” in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the “detriment of the availability or general quality of Internet access services for end-users.”

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

“Zero-rating” is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get “free” access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that “National regulatory and other competent authorities should be empowered to intervene” and “should be required, as part of their monitoring and enforcement function, to intervene” only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the “consistent application of this Regulation” by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be

assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:28

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:27

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:15

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:12

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?

Strictly from the end users' point of view there is never a demand for "commercial practices", as clearly end user's do not exercise any commercial practices. Any entity exercising commercial practices does so to generate value and income, goals end users' in - in their role as consumers - do not have.

Having said that, I think it could be considered unfair commercial practice from the end users' point of view if internet service providers would provide a myriad of different packages each with their own special condition and service, as that obfuscates the actual service provided, makes comparability between competitors impossible and therefore adversely affects market competition.

My name/organisation:

Alexander Herr, University Weimar

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

The notion of an "additional service" parallel to the Internet is absurd as either a digital packages are transmitted using structures of the internet (mainframes, routers, bridges, cables) or not. If not then a provider of such a "specialised" service would need to build and maintain a private intranet, similar to corporate in-house networks, that would scale - depending on the physical distance between sender and receiver - to something that is nothing more than a second Internet running in parallel. The amount of work of such an endeavor, only to provide a privatized copy of the distributed internet, could never evolve into a sustainable business model.

It is to be inferred that any "specialised" service is not an addition, but simply a subset of all Internet traffic. Therefore the only sensible answer to both questions is "mu", as their premise does not hold. There is no comprehensible digital, not-LAN transmission service that could be offered not using the already established internet.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

There is probably always a demand for services that could benefit one party in the classical "prisoner's dilemma". However a simple demand does not necessarily outweigh potential harm to the Commons.

What could be the positive and negative impacts of specialised services

on future innovation and openness of the Internet?

Non-egalitarian access to certain services always negatively impact innovation as not all potential innovators have the opportunity to use that service. In effect only established innovators are then able to innovate using such a service.

As should be clear, openness and non-egalitarian services are orthogonal concepts.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Commercial practices can be anything to increase income, regardless of its moral and ethical implication. Therefore laws and directives must exist to make transparent which commercial practices are to be considered unfair, i.e. limiting the rights of end users.

For examples I defer to the excellent list in the Annex I of the Unfair Commercial Practices Directive 2005/29/EC.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

DPI is effectively a method of mass-surveillance which stands in stark contrast to the privacy directives and statements of the European Union. No entity should be able to perform such surveillance methods and there should be a clear directive by the European Union to penalize such activity.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

Not at all.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Yes.

What would you consider to be "reasonable" traffic management measures?

How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

A "reasonable" traffic management measure is the concept of Quality of Service by which different services promote their own quality-requirements and has been in use for more than 2 decades. Building on this concept different protocols define and optimise in their architecture what quality-requirements they need and promote. Used effectively the diversity of different protocols would in itself reasonably manage traffic.

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions?

As an end user today I require information on the assured upload and download bitrate as well as overall latency. There is a reasonable expectancy that implementation of "specialised services" and different methods (all with non-technical, cheerful names) of traffic prioritization techniques would exponentially increase the information I, as an end user, need to have to make an informed decision about the my internet connection, in particular compared to that of a competitor's.

What information would you like to receive about the speed of your Internet connection?

As I said, today I only need information about the assured upload and download bitrate as well as overall latency. I do not want more.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

All of these parameters are dependent on more than just a connection to my ISP, which explains the current absence of these parameters from advertisements and contracts. However a clause for general quality should be included, so as to give end users' legal agency if an ISP cannot, for some time, uphold their contract (e.g. if the assured bitrate is consistently much lower than advertised (in which cases end users' should be able to transition to a cheaper subscription rate with a lower assured bitrate) or there is no connection for a time).

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They

cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is

logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 15 July 2016 10:22:03

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

From: [Gunnar Cedersund](#)
To: [NN-Consultation](#)
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:56

Dear Sir / Madam,

I am writing to you regarding one of the most important issues of our time: the neutrality of the internet.

This neutrality is the centerpiece upon which freedom of communication, equally of opportunity, and all other key facets of democracy rests, and become possible.

In other words, please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

If we would allow ‘fast lanes’ for the highest bidder, everyone else will end up in a ‘slow lane’. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.

In other words, I strongly urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, “zero-rating” or class-based traffic management.

As a comparison, in Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:
<https://avaazimages.avaaz.org/GuidelinePolicyAnalysisPdf.pdf>

Yours sincerely,
Ph.D. Gunnar Cedersund
Sweden

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:56

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:54

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:53

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:51

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:50

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:49

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:47

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:45

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:43

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:41

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 July 2016 14:15:38

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Christian Riegel

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?
The ISP should never be allowed to monitor traffic and definitely not to use deep packet inspection. Free communication is fundamental to free living.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit

services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation".

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under

the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

From: [Thomas El Khatib](#)
To: [NN-Consultation](#); allow-submission-to-berec@consultation.savetheinternet.eu
Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 13 July 2016 14:48:31

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name:
Thomas El Khatib

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

My ISP should not interfere with my internet connection at all.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

ISPs should only be allowed to impose traffic management measures in contracts where the user benefits e.g. from a lower price and this was explicitly advertised as caveat for this contract. In this case, there should be a warning, if the volume will soon exceed the previously agreed monthly maximum, and if this maximum is reached, the connection speed should be decreased to a level where basic internet functions such as reading emails and browsing non-multimedia content is still possible.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

Traffic management, commercial practised and technical conditions should be explicitly given as information before making a contract, in form of the standard legal information and in form of easily understandable example scenarios. There should always be a two weeks notice to nullify the contract.

What information would you like to receive about the speed of your Internet connection?

The ISP should guarantee the average available connection speed as well as its variance and should monitor it and notify the customer, if severe limitations occur for more than a few hours on a single day or one hour on several consecutive days, and offer compensation for these kind of failures.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an

engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines

and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”.

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every

deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Giuseppe Mammano

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation

guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of

Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft

guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:

Stephen Simmat

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

I do not see any "specialized service" that could or should be offered via the open internet, but through separated networks. No private end user will ever need such specialized service that an ISP could offer.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

Specialized services that were mentioned in the media are usually time-critical or need a special integrity. But such specialized services should not be routed through the open internet anyway.

There are dedicated connections that can be made over the same backbones (e.g. banks already do that for their finance transactions).

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No, the ISP should not be allowed to do that. Especially DPI is an embarrassment for the user and a violation of the privacy rights.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

The ISP should respect my QoS setting for e.g. VoIP for the connection from my home to the access point (e.g. DS SLAM), because here could be a bottleneck. Further in the network I expect bandwidths that are able to deal with all traffic without letting some transmissions drop.

But the ISP must not prioritize on his own, purely based on traffic type or destination/source. This would be an interference that exceeds his role a neutral third party.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

If the network has enough bandwidth, as it should always be the case, such prioritization is simply not necessary. Furthermore, it is not up to the ISP to decide (but it could consider QoS flags the user was giving). Time critical content like VoIP could be routed via dedicated connections as it was done for years till now. There is no need to cramp this through the open internet.

What information would you like to receive about the speed of your Internet connection?

I would like to know the average speed I will achieve, as well as the minimum guaranteed.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Michael Horn,

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines. There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and

therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups.

Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions.

The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 09 July 2016 12:58:25

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

This is only a cover-term. The access providers just look for a nice sounding excuse to introduce the costly special services.

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

The access providers should only offer the access to a free and unmanipulated internet (IPV4/IPV6).

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

This are not "specialized" services. A random delay of e.g. some 100ms is no problem for e-health. To connect cars on the same area via internet is technological nonsense. A short distance wireless data exchange is much more practical for this purpose.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

"Specialized Services" are the way to express more profit from the existing infrastructure without to invest money into the improvement of this infrastructure. All non-paying "non-specialized services" (and this is the typical internet of today) would suffer from this development. This is definitely positive for the profit of the internet providers in short term. It is definitely negativ for the people and even for the rest of the industry in our countries.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

The data for "commercial practice" will allays get the "right of way" in the infrastructure of the access providers, because this will guaranty extra profit. The rest (and this will be the normal internet) will have to live with the remaining bandwidth. this will of course limit the possibility to get fast and complete access to information.

On the other hand the access providers will see no need to increase the bandwidth as long there is enough bandwidth for there "commercial-praxis" data.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

Of course not. Privacy of communication is a constitutional right.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

He should not be able to do anything of this. He should only deliver un-manipulated IPv4/IPv6 .

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Yes.

What would you consider to be "reasonable" traffic management measures?

How can "unreasonable" traffic management measures affect you as a user?

Please, provide examples.

The job of the providers is to guaranty enough bandwidth. If they do this, then there can not be any reason to establish traffic management on regular bases.

The only technical reason for traffic management would be a countermeasure against an uncontrollable extraordinary traffic caused by a misconfiguration of network devices or a DDos. But this would have to be the exception.

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions?

Any provider which supports any of these practices limits the usability of its access for normal internet. Consequently all this information is essential.

What information would you like to receive about the speed of your Internet connection?

The guarantied minimum average speed over one hour and over one day.
Average response time delays caused inside the infrastructure of the provider.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

These parameters are to special to be useful for the average user.

Because of this they should not be part of the individual contract.

Instead minimum quality parameters should be defined by the government, and the license to become an internet provider should include the obligation to meet this specifications. (comparable to air pollution rules for cars).

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the

protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole. If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications,

but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 08 July 2016 23:50:34

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view? If there appears to be a demand for commercial practices like zero-rating it is my opinion that such a demand is created artificially and not necessary in an open and non-discriminatory internet.

My name and organisation:

Patrick Koppers, private and for the Patrick Koppers & Marcus Wittmann GbR

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

None. If given the chance, Internet access provider will eventually discriminate between their sservices to promote the more lucrative one to maximise their profits, ignoring negative impacts on the internet as a whole.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

No. Specialised services that important should be on a physically seperate network.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

I cannot see any positive impacts in regards to the innovation and openness of the Internet. Negative impacts there are many. Specialised service can put "gatekeepers" on the access to the internet an prevent startups and small companies that are not able to afford the extra-costs of the access to those special services. It's like letting private companies freely decide as to who can access the roads, and for which price.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Yes. Commercial practices will affect anyone, if you are partaking or not. Prioritising certain internet-traffic above all others will slower the speed of the general internet for everyone else. Services like zero rating will influence users to use certain services, and as the ISP has the discretion to grant zero rating to services of their choosing, service providers are forced to negotiate terms with every ISP. This will, in the end, negatively affect my access to certain services who cannot negotiate terms with my ISP, or cause services to stop altogether.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No, not for traffic management nor for anything else. The users internet traffic almost always contain private information. The ISP should in no way be allowed to have access to

any of those information, even if they promise to use it only anonymized.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?
Not at all. If I want my internet connection to be customized, I may do so myself and on my own bidding.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Yes, especially if it is their technical requirement, not my technical requirement. If my internet connection is negatively impacted because of a choice my ISP made to which I disagree, this will certainly limit my freedom since I will always have to keep in mind as to what discrimination my ISP deems to be reasonable and how it could affect my connection at the time.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

There is no reasonable traffic management measure my ISP could do. Any measure affecting my traffic management that I do not apply myself for myself (and can undo for myself) will sooner or later negatively affect me.

Any measure of traffic management applied in general may limit or stop access to services important for me at the time.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

Any measure my ISP will or can apply to my internet connection must be declared, in combination to the conditions under which the measure is applied and the way that this has an impact on my internet connection.

What information would you like to receive about the speed of your Internet connection?

I would need the average speed and the availability of my internet connection for different time-periods (i.e. last month and last year as well as, for the average speed, during the day, night and evening). I would also like to know how the traffic is routed until it leaves the sphere of influence of my ISP.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Any parameter (technical and non-technical) that has an influence on the quality of my internet connection (speed, availability, etc.) should be easily accessible by the end user if he wished to do so. High-level parameters (average speed and availability) should be part of the contract, with detailed parameter (jitter and package loss for example) being included by at least one of the high-level parameters.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical

discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it

is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against

encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Thorben Schmiedel

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation

guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of

Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft

guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users." Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet. It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. ♦ Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and

unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself.

Transparency has limited scope in fixing problems, particularly in this context.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the

provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is

permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 29 June 2016 11:13:35

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view? I believe Internet should be free of any "commercial practices" such as zero-rating. All Internet traffic should be treated equally.

My name/organisation:
Mihai Stefanescu

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

I can't think of any.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

I don't believe there is.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Yes it could limit my rights. Internet access providers could decide which services and/or applications pricing rules apply and charge accordingly.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No. Should the regular mail service providers be allowed to open letters for the purpose of "optimizing" anything?

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

ISPs shouldn't be allowed to interfere with the Internet connection. All traffic should be treated equally.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

It will. I don't see any reason why traffic should be treated differently depending on content type, originating service, requesting application, etc. ISPs are free to charge the end user money for providing as much traffic as they can sustain given a specific infrastructure. If they can't sustain the traffic then they should invest in upgrading the infrastructure.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide

examples.

The only reasonable traffic management measures are the ones that rely on transparent traffic characteristics, e.g. total amount of bytes transferred, upload speed, download speed, etc. Unreasonable traffic management measures such as charging differently depending on traffic type imply techniques as deep packet inspection which undermine user privacy.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

All of the above.

What information would you like to receive about the speed of your Internet connection?

Average upload and download speed.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

As much technical details as possible, because technical data cannot be interpreted as one wishes.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under

the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 29 June 2016 02:02:59

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Grégoire Kooyman

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?
My ISP should not be able to prioritise certain types of online traffic over other.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Traffic management appears to me as ripe for abuse and unless a strong independent authority oversees how it is used I would not trust my ISP to use it as intended.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

I would need to know a few technical conditions (namely the speed of the connection), whether my ISP values my privacy and net neutrality and how restrictive the contract with my ISP would be.

What information would you like to receive about the speed of your Internet connection?

I would like to know about the minimum speed of the connection and when to expect it.
The advertised speed should be available to me more than 90% of the time.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

As someone who sometimes plays video games online latency is an integral component of my gaming experience. I would expect my ISP to provide a connection with <50 ms latency and to tell me when I should expect my latency to increase sharply over a period of time.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a

balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have

to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce

it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation

guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of

Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft

guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 20 June 2016 16:23:45

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

There is NO DEMAND for end users for zero-rating. They just pay a flat plan and want unprioritized internet traffic they want to use. No special treatment of some "services" as greedy provider bills the content provider for better (or not artificially influenced !) connection.

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

My name/organisation:

Ludwig Jaffe, CEO of Jaffe-Engineering UG, Munich

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?
low latency VPN for connection of automation systems, guaranteed fixed (slow to medium)bandwidth, guaranteed low latency and delay.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?
Remote management of automation systems, automation data collection and data modification on distributed sites. "Industry 5.0"

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Usecase: Automation

Specialized Services compete with the internet in routing resources.

So prioritizing special services shall only take place if *technically necessary* like a low

latency-but-slow-to-medium-speed-automation-vpn. - Industry 5.0

This means, an automation event needs to be transferred on the instant with extreme high priority, higher than the internet, but the overall traffic/bandwidth shall be low (just parameters which are not time critical) , so that 99% of the time the internet is routed at good performance and may only be interrupted for a short low bandwidth realtime event.

Abuse of greedy providers:

Dangerous is the abuse of prioritizing traffic to monetize traffic routing (slow down youtube until youtube pays to the provider not to slow them down. Garble packet sequence of VOIP-connections in order to force the users (especially mobile internet) to use regular phone calls which are highly priced in comparison.

Try it with some providers like Telekom in Germany and call skype test call with mobile smartphone. After reproducible 30s the audio is unreadable as Telekom changes the delay of packets in order to destroy VOIP communication using skype.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Example: I use a voip phone to call to gambia to coordinate a project.

If I would use a landline I get a good voice quality and I get highly billed.

Using VOIP the call is cheap or for free.

Families who want to call relatives in remote countries with high phone prices can have advantage from voip connections.

Greedy providers influence routing to stop user using VOIP due to bad quality. Then the provider asks for more money and removes the bad routing.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

Of course not.

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Deep packet inspection causes additional delays and enables the provider to do censorship of traffic and add delays to certain service classes like vpn, voip, videoconferencing

in order to cash tripple : content provider, user of internet

connection, user of special content.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Only exception: low overall bandwidth event messages which should be routed using special protocols, may be even be no IP traffic at all!

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Of course it will be limited, as I do not want my Internet traffic to be inspected and routed differently.

All Internet-Traffic IP-Traffic shall be routed equally.

Only special Protocols could be routed differently.

For example an ATM connection over IP that gets a fixed guaranteed bandwidth cut out of the internet connection. But here the delays and bandwidths must be guaranteed.

No prioritization of youtube videos against vpn or certain search engines against others or certain software distribution sites against P2P distribution of e.g. linux software.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

ALL INTERNET TRAFFIC HAS TO BE ROUTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Only reasonable traffic management is to ROUTE NON-IP traffic like ATM

in a different and guaranteed way.

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions?

Guaranteed maximum delay times, Guaranteed minimum bandwidths, If traffic is influenced or inspected.

Supported protocols (IP, ICMP or also some non internet protocols)

What information would you like to receive about the speed of your Internet connection?

Maximum guaranteed Delay, Minimum guaranteed Bandwidth

Supported services, pricing, metering

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Parameters should be stated according to measurable parameters in accordance to internet standards like RFCs.

e.g.

DSL standard: latency <100ms, jitter <10ms, guaranteed bandwidth to backbone of country like DCIX >2000kbit/s, packet loss <0.1%

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines. There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2). Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory

Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups.

Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and

hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 20 June 2016 16:20:18

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?
There is NO DEMAND for end users for zero-rating. They just pay a flat plan and want unprioritized internet traffic they want to use. No special treatment of some "services" as greedy provider bills the content provider for better (or not artificially influenced !) connection.
ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

My name/organisation:
Ludwig Jaffe, CEO of Jaffe-Engineering UG, Munich

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers?
What are the characteristics of such services that would justify the fact that they are not offered over the internet?
low latency VPN for connection of automation systems, guaranteed fixed (slow to medium)bandwidth, guaranteed low latency and delay.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?
Remote management of automation systems, automation data collection and data modification on distributed sites. "Industry 5.0"

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Usecase: Automation

Specialized Services compete with the internet in routing resources. So prioritizing special services shall only take place if "technically necessary" like a low latency-but-slow-to-medium-speed-automation-vpn. - Industry 5.0

This means, an automation event needs to be transferred on the instant with extreme high priority, higher than the internet, but the overall traffic/bandwidth shall be low (just parameters which are not time critical) , so that 99% of the time the internet is routed at good performance and may only be interrupted for a short low bandwidth realtime event.

Abuse of greedy providers:

Dangerous is the abuse of prioritizing traffic to monetize traffic routing (slow down youtube until youtube pays to the provider not to slow them down. Garble packet sequence of VOIP-connections in order to force the users (especially mobile internet) to use regular phone calls which are highly priced in comparison.

Try it with some providers like Telekom in Germany and call skype test call with mobile smartphone. After reproducible 30s the audio is unreadable as Telekom changes the delay of packets in order to destroy VOIP communication using skype.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Example: I use a voip phone to call to gambia to coordinate a project.
If I would use a landline I get a good voice quality and I get highly billed.

Using VOIP the call is cheap or for free.

Families who want to call relatives in remote countries with high phone prices can have advantage from voip connections.

Greedy providers influence routing to stop user using VOIP due to bad quality. Then the provider asks for more money and removes the bad routing.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

Of course not.

ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Deep packet inspection causes additional delays and enables the provider to do censorship of traffic and add delays to certain service classes like vpn, voip, videoconferencing in order to cash tripple : content provider, user of internet connection, user of special content.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Only exception: low overall bandwidth event messages which should be routed using special protocols, may be even be no IP traffic at all!

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Of course it will be limited, as I do not want my Internet traffic to be inspected and routed differently. All Internet-Traffic IP-Traffic shall be routed equally.

Only special Protocols could be routed differently.

For example an ATM connection over IP that gets a fixed guaranteed bandwidth cut out of the internet connection. But here the delays and bandwidths must be guaranteed.

No prioritization of youtube videos against vpn or certain search engines against others or certain software distribution sites against P2P distribution of e.g. linux software.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

ALL INTERNET TRAFFIC HAS TO BE ROOTED EQUALLY. THERE IS NO INTERNET TRAFFIC THAT IS MORE EQUAL!!

Only reasonable traffic management is to ROUTE NON-IP traffic like ATM in a different and guaranteed way.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

Guaranteed maximum delay times, Guaranteed minimum bandwidths, If traffic is influenced or inspected.

Supported protocols (IP, ICMP or also some non internet protocols)

What information would you like to receive about the speed of your Internet connection?

Maximum guaranteed Delay, Minimum guaranteed Bandwidth

Supported services, pricing, metering

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Parameters should be stated according to measurable parameters in accordance to internet standards like RFCs.

e.g.

DSL standard: latency <100ms, jitter <10ms, guaranteed bandwidth to backbone of country like DCIX >2000kbit/s, packet loss <0.1%

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines.

However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial

practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it.

Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of

traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 18 June 2016 08:09:09

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

Why should the company who pays my ISP get more impact on me and my internet then other. Sounds not good and unfree.

My name/organisation:

Kurt

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

e-Health but only it has impact of the live and death of humans. All other things are not "important".

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

New inventions or little companys can maybe have an harder start or settings. Thats not fair.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Yes. Buying-Decisions, Information and learning chances. Especially free and equal information is necessary for the democracy and life.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No. Not really.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

Maybe a line (fo all users!) for streaming, but not extra payed or fees. Included but technically built that it has no impact on browsing other websites or surfing.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Some online buisnisses or developments are not possibl anymore. Thats maybe or for sure not good for my job.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

i am not sure what is all "reasonable". Sounds like a huge word. Could be all.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

All of them you mentioned in the question. The companys who take influence, how and why. Alternative choices during the contract periode. Opt-Out possibillitys whitout getting an bader contract or conditions.

What information would you like to receive about the speed of your Internet connection?

Statistics and actual traffic, maybe including points which shows influence, especially when it is slow or slowed down.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Yes in a range it should. makes it transparent and fair. Means more right to get the contract and the quality a customer pays for.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole. If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities

should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 16 June 2016 03:24:11

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:

Alex Tranter

IT Consultant

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect

would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the

minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the

performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
T. Bro.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation

guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of

Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft

guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines creation
Date: 14 June 2016 13:13:11

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view? A throttling of the internet connection is NOT required. Telco providers simply want to squeeze out every penny of their users. Therefore there is NO need for zero-rating.

There is NO congestion!!

<https://www.techdirt.com/articles/20130118/17425221736/cable-industry-finally-admits-that-data-caps-have-nothing-to-do-with-congestion.shtml>

My name/organisation:
Freifunk Uelzen e.V.

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

NO! Your arguments are INVALID!

E-health should use leased lines and NOT the internet. Especially in terms of security (hackers)!

Connected cars do NOT need a permanent internet connection. This is a lie coming from telco providers.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

NO! AGAIN!

E-health should use leased lines and NOT the internet. Especially in terms of security (hackers)!

Connected cars do NOT need a permanent internet connection. This is a lie coming from telco providers.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Specialised services will negatively affect the internet.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Yes. I am basically already FORCED to use only one music streaming service because it is not affecting my data cap. Other music services "eat" my data volume within hours (to days).

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

Deep packet inspection is NOT traffic management -- it is surveillance. This will wet the

appetite of spammers, legal advertising companies, dictators censoring the internet, etc.
etc.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?
NO PRIORITISATION AT ALL!

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?
I want to "see" everything. If it takes longer I still want to see it.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

Traffic management is only reasonable if a broken device or a congested network needs to be "driven" around.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

What kind of traffic management do they use?

What traffic do they throttle?

Do they throttle at all?

What devices do they use?

What information would you like to receive about the speed of your Internet connection?

I would like to know how fast my internet is - **PRECISELY** to the Mbit/s!

Not like the Deutsche Telekom currently does with "up to 50Mbit/s". I ordered a 50Mbit/s line. I only get around 25Mbit/s.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

They should specify the average latency, jitter, packet loss for each ordered line. On top I would like to see daily, monthly, yearly statistics. **WITH** a SLA!

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and

other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic

management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Kind regards,

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 03 July 2016 17:08:24

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?

The end user wants a good product (internet access) to a fair price (cheap). As this is a complex matter not all have a solid understanding. As freedom of speech and press access to the internet (and its information) should be a human right. Therefore limiting this access would undermine a basic right.

My name/organisation:
Sven Paulus

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

None

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

Only very sensitive matters shall be physically separated from the internet. The best way would be to use secure (e.g. encrypted) services. This would push safe usage of products and still use the same infrastructure without discrimination.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

The internet is build on free, open and non-profit grounds. If commercial interests are used to divide it into different 'classes' this would discriminate those who could not afford to pay for the 'upspeed' (essentially that would be the service level of today just for more costs)

Just consider the massive open source ecosystem that is used in commercial products.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

See above.

Almost all resources that I use are 'free of charge'. I pay for my landline as I do for my mobile plan. Why should the ISP charge the resources provider as I already paid the bill?

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No as this would violate my privacy.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

My ISP should offer me my promised bandwidth at 98% of the time. He should charge me the amount he needs to maintain a service that offers me the promised bandwidth. Therefore he should not interfere with my connection.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Yes as I want to choose what is sensitive and what not.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples. If the ISP offers a Flatrate there is no unreasonable traffic - except if you use your connection for your business but booked as a personal account. This is different when the ISP offers limited data plans as they do with mobile.

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions? All above. I want to know what I get and what I pay for. I should have the right to cancel the contract if there is violation of my rights.

What information would you like to receive about the speed of your Internet connection?

A guarantee which speed I will get 98% of the time.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

No, as this is too complex and often attributed to several factors.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of

specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet. It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other

competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 15 July 2016 19:41:36

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?

Zero rating is a cheap trick to make the real price opaque. Transparency is needed and benefits the customers. It is understandable that ISPs demand more ways to rip off the customers. Once all ISPs use these tactics the customers have no choice any more. Regulation should help the customers and force the ISPs to offer what the customers want and need instead of what is best for the ISPs shareholders.

My name/organisation:

Lars Pötter

What other "specialised" or "optimised" services (that can be given specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

Private networks with defined parameters (bandwidth, delay, responsiveness) for real time applications with fixed set of end points. No connection to the Internet on these special lines! Basically the same as using separate wires.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

If a connected car has a problem if it does not get some information fast enough, then that car is broken! Connected car only means web surfing while on the road. So no special requirements apply here. Autonomous cars that do their own driving have higher demands on data flow. But here again if an autonomous car crashes because the mobile connection broke down that that car is dangerous. In such situations the car must be autonomously able to solve the situation. Otherwise it is too risky for people to ride that car, or be on the same road. EHealth as in "sending patient data to hospital while still transporting patient to hospital" has no demand for a special service. The inspection of the data by the doctor in the hospital will take much longer than the transfer on today's networks.

Ehealth as in "remote operations with the doctor in location a and the patient in location b" need a network connection that can guarantee a quality of service for the real time data connection. The same is also needed for high quality Video conferencing or VoIP. ISPs should be able to offer a service where they guarantee a certain data rate with real time Quality of service. The customer could then have his equipment label all the packets of the real time streaming application (Video streaming, voice, remote control signals) with this quality of service requirement (these labels are already specified in the currently used protocols) and the ISP guarantees the real time delivery. Here a higher fee for a higher data rate for prioritised packets would be ok.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Having a service with guaranteed real time qualities could open up the chances for new applications. Having only one side of the service pay for this makes it hard for new companies to enter the market.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

If company A has a contract with my ISP to zero rate their content. And I'm a customer of company B. Where A and B offer payed service (Video streaming, VoIP, Music streaming,...) I will be paying my ISP and company B but will get not the same service as if I would be using company A. If company B has a zero rating contract with another ISP I would get a better service if I switch to that ISP. As a customer I want to choose the ISP based on it's performance and price and not let my other service providers force me to use a different ISP. That other ISP may not be offering his services at my location or the pricing might not match my demands. ISPs and service providers should be independent. As there are so many ISPs it makes no sense to demand that the service providers have zero rating contracts with all ISPs.

If some services have special demands on the ISP then the ISP should charge the customer, but not the service provider for that service.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No it should not. If information regarding the traffic is needed then the information in the protocol headers should be used. This way an ISP could block all HTTP Traffic but let the VoIP traffic through. That would block or slow down the Web surfing but not disturb phone calls. No need to listen into the call to be able to do this kind of traffic management.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

Prioritisation of traffic should be the customers decision. The ISP must be best effort. If I as the customer book addition high Quality bandwidth then I want to decide if I use that for p2p (might be control signals of satellite dishes to search for aliens) or video streaming. The ISP should only provide the pipes for my data nothing more !

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

If this is transparent and user changeable then it is OK to prioritise the VoIP call over the Web page. But prioritising company A that has a contract with the ISP over company B that does not have such a contract is not OK. I as the user decide who I want to exchange data with!

What would you consider to be "reasonable" traffic management measures?

How can "unreasonable" traffic management measures affect you as a user?

Please, provide examples.

reasonable: slow down of certain protocols (HTTP, FTP, SSH, ..)

unreasonable: slow down VoIP to company B but not VoIP to the service offered by the ISP.

It should be transparent to the customer. For example a web site listing all traffic management measures a ISP applied. This way the customer could used the ISP that has the best network (needs the fewest traffic management because there is always enough bandwidth available)

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions?

Guaranteed minimum bandwidth (if there is one), average bandwidth possible, limits on data transfer per month, Interconnection speeds to certain parts of the network (most importantly if they need "traffic management") this would tell me that that ISP has only a slow connection to Youtube. And if youtube watching is what I want to do with my Internet service then that ISP would not be the best choice.

What information would you like to receive about the speed of your Internet connection?

Ideally I would want to know whenever I hit a limit, and what the reason for that limit is. Normally I don't use 100% of the bandwidth that my ISP sells me. But sometimes some services are slow. It would be good to know if the download is so slow because I'm one of one million users downloading the same file from one server that is just not up to the job, or if somewhere along the way my download must pass a router of my ISP that is overloaded at that time. In the second scenario I would blame the ISP for not investing enough into his network. I could then switch my ISP. But I would need that information to be able to make that decision.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Besides the max data rate (up and down) the ISP could also give a real time data rate (that is much lower). He would then have to prove that even if all customers use 100% of that real time rate he still has the network bandwidth available to send out all that data. This rate should then be defined in the contract.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality

of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of

this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”.

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to

enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Dear Sir or Madam,

please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?
No. These "commercial practices" do NOT serve the users in any way - they serve the ISPs only and are a tool to manipulate and patronise their users.

Now, with an open internet, the choice what web-sites to use, is the user's alone. With zero-rating and similar tools, the ISPs would force especially poorer people into the services the ISPs want them - i.e. eliminating the user's free choice.

My name/organisation:
Marco Nguitragoon

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?
There are none! Everything can and should be offered over the regular internet. As a software-developer and thus expert in this matter, I can give a simple and clear reason: A new, separate channel costs additional resources for maintenance. This means, a company either has more costs when introducing an additional channel or it simply reduces its resources for the old, classic channels. The first is highly unlikely as competitive pressure makes all companies reduce costs rather than increase them. The 2nd thus the expected result. This means: Companies would not invest into the classic internet, anymore.

Technically, however, there is no reason at all for an additional communication channel. The internet is designed to be multi-purpose. And this is exactly the reason, why today even phones are operating via the internet (VoIP)! Old phone lines slowly but surely disappear - and many of them already disappeared.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?
Nonsense!

If the regular internet is not fast or reliable enough, then the providers should invest some more money into making it faster - instead of the nonsense-marketing, they're burning their customer's money today!

I'm currently on a business trip in Thailand - and the internet is much better here than in Germany! In the middle of nowhere, you can get fiber optics! The problem is not a technical one. There is no need for "specialised services"! There is a need for real investments in Germany (and other EU countries). The west has become a third-world-country when it comes to IT!

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?
If specialised services were allowed, they'd be a Pandora's Box opened that slowly but surely would suffocate the innovation and openness that the internet characterises as we know it today.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?
Yes, of course. My right is a free choice of what web-site I want to visit. If I want to read my news from BBC, Spiegel or [blog.fefe.de](#) is my decision. If, however, one of them is free and the others cost money - where's my right of a free decision? This is clear manipulation! I'd need a very strong will to act against the predetermination of my ISPs "commercial practices".

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No! Of course not! Are you still sane to ask such a question?

My traffic is out-of-business to everyone except my peer with whom I'm (or my computer is) communicating. In a perfect world, my ISP should not even know with who I communicate - let alone what!

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

My ISP should NOT be able to interfere with my internet connection AT ALL!

If I want to shape MY traffic, I AM THE ONLY ONE ENTITLED to do so. And I easily can, using the appropriate tools either in my application (e.g. set a bandwidth limit in my P2P application) or in my firewall (every good firewall supports traffic shaping).

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Yes, because I do not trust them. As soon as this is allowed in general, I can be sure they're abusing it against me. And I have no easy way to find it out and probably no way at all to prove it.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

There are no reasonable traffic management measures! As already pointed out: As soon as they're allowed to temper with the traffic, they're going to do so against their users interests and solely in the interest of their own profit maximization.

Therefore, all traffic management measures must be illegal! And since they are very hard to prove, every traffic management proven must cause very high punishments (they might very well cause the end of the ISP - that's fine!).

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

I'd want to know every single detail of my internet connection. This includes not only traffic management and commercial practices (if allowed at all - as said: they should be illegal!), but also all technical properties both on the side of the ISP to me as well as the ISP's back-end (i.e. how's peering to other ISPs?)

What information would you like to receive about the speed of your Internet connection?

I want a minimum *guarantee* of bandwidth, latency, packet loss and all other relevant infos to multiple places in the world - not only between my house and the ISP but also behind this point.

Just like when I buy a bread: I want the guarantee that it's at least 500g (and not "up to" 500g - to all you internet-printers: Imagine you go to a bakery and you get a bread of only 100g even though you ordered 500 g - and it's legal!)

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

Yes, this should all be in the contract. And as already stated: There should be guarantees for

- 1) a minimum
- 2) an average per hour
- 3) an average per day

A theoretical maximum (as it is current practice) is not interesting to me. I want to know what the ISP can guarantee!

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an

open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Kind regards,
Marco Nguitrangolo

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

My name/organisation:

Klaus Marquardt
myself

Is there a demand for specialised services? Which services should be allowed this special treatment?

Services of public interest, related healthcare, science, or discussions in parliament might be allowed special treatment. These are those services that tax-free organizations would provide.

This special service needs to explicitly exclude any entertainment (like music, sports, movies) or advertisement.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

The current financial power would be expressed as a power of opinion and influence.

We would create a society where "rich" would apparently equal "right", in a self sustaining mechanism.

Should the ISP be allowed to monitor your traffic, including its content (e.g. through deep packet inspection) for the purpose of traffic management?

Only to identify when my (or others) desire for entertainment would impede my (and others) attention to public interests.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of

Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft

guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Please treat this comment confidentially and don't publish it.

Kind regards,
Klaus Marquardt

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 14 July 2016 22:45:52

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Simon Feldmeier

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and

start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this

regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the

complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 14 July 2016 11:15:23

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

From my point of view, Internet-connection is one of the fundamental needs. (Like having fresh drinking water, power supply, .. etc.)

It should be available for everyone in the same speed at a fair price.

So there is no need for commercial practices like zero-rating.

My name/organisation:

Jan Schreiber

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

Speacial Failsafe connections. (e.g. to nuclear power plants, police or military facilities)

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

No. These special demands need special desaster recovery stratigies (e.g. Backup-Connections, alternative routings ways (satellite, fibre, radio..), but they don't need a "special" treatment in the normal connections

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Its about who defines what needs a specialiezed service and who not. Is amazon-prime important? Is my startup important? Is a stable connection to the next police-department important?

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

If I pay for every MB traffic, except for the content of my provider, his content is more likely to be viewed.

So if someone tries to offer the same content in a better/cheaper/more convinient/.. way, he might fail to establish himself at the market, just because of the fact, he is not my provider.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No.

I don't want my traffic-content to be inspected.

I don't know, who will use this information and for what purpose.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

My ISP shall not know, if this package is a video or a P2P package.

So it should not be able to prioritise my internet connection.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Of course.

Than it would be their choice, if I can watch that movie now, or if I should start an hour later, because right now there are to much premium-members who want to watch their movies.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

It is reasonable to measure the traffic as a whole. If there is to much traffic, all connections should be limited.

If my service relies on a high transferrate, I will take care for a backup-solution.

If this measurment is unreasonable, perhaps, everthing will work fine, but there is a slight risk that premium members might have a delay and my ISP decides to slow my connection down.

I simply do not know what are the reasons for that.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

What kind of technic do they offer? (Fibre, Wireless, Satellite, etc.)

Do they slow down my connection in certain cases?

What information would you like to receive about the speed of your Internet connection?

How much bandwith do they guarantee as a minimum?

What is their maximum?

How should ISPs describe other parameters of their Internet access offers, such as quality of

service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

There should be a guaranteed minimum bandwidth.

And a kind of SLA "We guarantee a connection with minimum bandwidth on 97% of the time"

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users." Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and

other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. ♦ Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself.

Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 12 July 2016 23:11:31

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?

No. Except in the same way could be a demand for loans sharks.

My name/organisation:

Herre Kamsma

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

None. A "specialised" or "optimised" service would need to either use its own physical infrastructure (or 1:1 non-overbooked capacity) on a shared network (e.g. rented lines). The mere fact these services require additional characteristics in itself merits the use of dedicated (virtual) infrastructure.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

Either of these services can only be made reliable by excluding possible points of failure, and is not enabled by introducing additional management of the demand of other users of a network. A connected car network that does not merely connect nearby cars to one another but needs prioritised communication to some far-away location is necessarily unsafe as there will be single points and modes of failure for many cars, as these would all be communicating with a single point. Similarly e-health would either be non-contingent on the speed of the connection (when simply taking measurements like many IoT devices already do today) or merits the use of dedicated infrastructure that can exclude additional points and modes of failure

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Allowing specialised services may allow certain innovation whose succes (or even feasibility) is contingent on a certain quality of communications services to be cheaper by reducing the cost of initial infrastructure, that would otherwise have had to be dedicated to only this service. Allowing such classifications of traffic within a network could however lead to more or less arbitrary reclassifications of traffic based on the financial considerations of the network operator. The division of the available capacity of the network among its users would necessarily be less transparent.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Yes. Certain services (e.g. video services for entertainment purposes, such as Netflix) could use the specialised services provisions to justify demands for improved connectivity with their services, as opposed to possible competing services. Due to the scope of incumbents activities, their services could offer a superior user experience to alternatives and use these qualitative difference to keep alternatives small and reduce the influence competition can have on the marketplace.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No. An ISP should consider only the volume of traffic through particular links as well as source and destination of this traffic when considering how to manage the traffic they need to deal with. The contents of these packages are of no concern to an ISP.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

An ISP shouldn't prioritise certain types of traffic. If characteristics of certain traffic flows are important to a

service provisions to ensure the quality are taken in the design of the service. Allowing ISPs to prioritise certain types of traffic would not improve a well-designed service, while opening the door to commercial reasoning when deciding the distribution of traffic.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

ISPs discriminating between online content based on their technical requirements would not be necessary for a well-designed service, and therefore only encourages ISPs to use such provisions in improper ways. When a network is fully congested an ISP has apparently oversold its services and a reduced quality of the end user experience would be an ISP's penalty for doing so.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

I do not consider there to be any reasonable traffic management from the ISP's point of view. Any decision with regards to traffic management will necessarily be detrimental to another service and is therefore likely to be subject to commercial considerations. A typical example may be a video streaming service that is tagged by an ISP to be time-sensitive (and will therefore be a special service) and is therefore favoured during peak hours. Competing video services that have not paid to be a special service and do not have the market power to be classified as such at the rates as the incumbents would be powerless in such a situation. Such "reasonable" traffic management could therefore easily be combined with "special services" to lead to exactly the practices that net neutrality is supposed to prevent.

What information would you need to make an informed decision about your Internet connection? For example: traffic management, commercial practices or technical conditions?

ISPs should be transparent on the degree to which the connections they offer to end users are overbooked and what traffic management practices they employ on their network. If traffic management would be allowed ISPs should be obligated to offer an overview of congestion on their network to allow third parties to check whether traffic management policies are followed.

What information would you like to receive about the speed of your Internet connection?

ISPs should indicate the speed they can guarantee most of the time (e.g. 99% of the time, but this number may be different).

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

An average and standard deviation of the latencies within the ISP's network should be offered by the ISP as well as an indication of the latencies that can be expected in the last mile (which is of course technology dependent).

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market

entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental

rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Raoul Bhatia

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with

the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a

payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”.

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

Please treat this comment confidentially and don't publish it.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 08 July 2016 23:19:57

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view? Regarding commercial practices one has to look at actual actions of players in the business. The main goal for any company is to increase their market share above its competition and avoid competition where possible. This is at the core of whatever "commercial practice" is taken a moniker for.

Consider ISP Alpha, ISP Beta and media companies Mike and November. As long as they are independent only the ISPs are competing with each other, as are the media companies. Let media company Mike buy Alpha. Now there's a strong incentive to punish November's content in the network Alpha and also degrade performance content provided by Mike in the Beta network. This skews the market leading to quasi monopolies. This is not a hypothetic example, it's a hard fact for customers in the United States of America in which 3 media conglomerates divided up the market between them, removing competition and leaving the customer with sub-par Internet access and reduced choice in media.

Zero-Rating is just inverse discrimination against competitors services by providing large discounts on own products. If applied to Internet applications this violates the key principle of the Internet.

My name/organisation:
Wolfgang Draxinger

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet? None. The whole point of the Internet is that all packets of data are treated equally without discrimination of service types.

Special purpose applications that depend on guaranteed connection specifications can only be operated reliably using dedicated circuits.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)? No. Specialized services that have special requirements on bandwidth, latency and reliability should be operated only over dedicated connection circuits that are managed separately from regular Internet traffic.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet? The core principle of the Internet is that all packets of data are treated equally without discriminating on the underlying application. Introducing the concept of "specialized services" goes against the essential principles in the

design of Internet operations. There little to nothing to gain from treating some packets more equal than others (to paraphrase Orwell) but much to loose.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples? Yes. My expectation when obtaining Internet access is, that all the data I exchange thereby is treated equally. An ISP that enters special agreements with say, YouTube, but not Vimeo is infringing on my choice which of the two services to use for sharing content created by myself. The same applies to other data intensive services as online backup, work-from-home or even the choice of server hosting provider I might choose to run my own blog.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management? No. Actually deep packet inspection would violate existing privacy in telecommunications laws. Also in practice with increasing demands of privacy and encryption it becomes technically infeasible because the very goal of encryption is to prevent traffic inspection. In information security the inspection of traffic is one of the main modes of hostile attack against information integrity. This alone should be enough of an indicator that traffic inspection is not only undesirable but effectively harmful toward Internet infrastructure as a whole

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)? Not at all. My and my peers data, my rules.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity? Yes. How is the ISP to decide if something I do over the connection I paid for is time critical to me.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples. Reasonable: There's a guaranteed minimum bandwidth stated in the contract with the ISP that it gives best effort to achieve and a maximum contractual bandwidth to which the connection is throttled indiscriminating on type of traffic.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions? Uses traffic management? If so how is traffic classified (QoS tag, DPI). Bandwidth allotted toward Internet exchange. Are there special peering contracts with content providers / delivery networks or hosters that discriminate against traffic over regular Internet exchanges.

What information would you like to receive about the speed of your Internet connection? Minimum guaranteed bandwidth and packet time-of-flight to next Internet exchange based on best effort and assuming connection against a peer with "infinite" bandwidth at the nearest Internet exchange. Maximum allotted bandwidth guaranteed for all packets.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should

these parameters be defined in the contract? If so, how? Mean and standard deviation of latency between customer connection point and ISP internal network, maximum expected intra packet time-of-flight times to Internet exchange as determined by router buffer sizes and expected packet loss. Total bandwidth allocated at Internet exchange points, and worst case scenario bandwidth limitations resulting from ISP network overcommitment.

Also important parameters are the kind of addressing scheme used for end customers (does an end customer get a public IPv4 address or is Carrier Grade NAT applied). For IPv6 the length of the prefix and in case of dynamic prefixes the length of the renewal period.

Any kind of filtering or impairment of traffic that's based on service, parameters (like IP port number) direction (ingress or egress) of a connection.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole. If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees. Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users." Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet. It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines. There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2). Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such

practices be banned under the provisions of Article 3(2). In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC’s mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the “consistent application of this Regulation” by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs’ assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC’s draft guidelines interpret “reasonable traffic management” which is inconsistent with the legislator’s intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended “reasonable measures” to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth). According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based

traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Kind regards,

Wolfgang Draxinger

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 08 July 2016 18:13:48

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?
>>>I can` t really imagine why any consumer in his right mind would want to return to a new version of the internet simulation Disneyland that AOL once offered as "The Internet".

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliabiity) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

>>> APART FROM INDIVIDUAL B2B APPLICATIONS, VPN USAGE OR SIMILIAR, MY FANTASY FOR THIS SEEMS TO BE QUITE LIMITED. And even those should forced onto private networks/ dedicated land lines to be provided in addition to the public internet capacities.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

>>>MIGHT WELL BE BUT CERTAILY IS NO REASON TO PRIORITIZE THESE INSTEAD OF ADAPTING OVERALL NET CAPACITIES.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

>>>I DO NOT EVEN AGREE THAT MY PROVIDER SHOULD HAVE A RIGHT TO EVEN REGISTER WHAT I DO AND WHERE I AM GOING ON THE WEB, MUCH LESS SHOULD HE HAVE THE RIGHT TO ANALYZE AND PRIORITIZE OR EVEN INHIBIT MY ACTIONS. HIS BUSINESS SHOULD BE TO PROVIDE CONNECTIVITY AND BANDWIDTH. ANYWHERE AND TO THE MAX. AND ABSOLUTELY NOTHING ELSE. FULL STOP.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

>>Hell, no. Of course not.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Gerrit Kirpal, EU citizen

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the

guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small

businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned citizen

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 01 July 2016 16:45:41

Dear Consultation,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services, to the detriment of all.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services was clearly shown by the changes made to the wording during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a

payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (ie, of individual applications or whole classes of applications) and zero-rating for a fee (ie, where application providers pay to have their data zero-rated) are commercial practices that systematically — regardless of their scale and the market position of the players involved — interfere with the end-users' right under Article 3(1) to impart information. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. Such practices should therefore be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating

also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency. In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subpara 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 26 June 2016 11:38:41

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

The Regulation explicitly bans commercial practices that limit the exercise of individual user's rights online. Zero rating (where access to some applications/services is unlimited while all others are counted towards your monthly download limit) allows the provider to discriminate between online services. Zero rating clearly contradicts the intention of the legislators in protecting the open and unrestricted access to the Internet. Zero rating limits the possibility for users to distribute content, services, or applications, which undermines innovation, dialogue, or exchange of knowledge.

Commercial practices in the Regulation should be understood as any restriction on the basic functionality of the Internet for commercial purposes and which is not necessary for the functioning of the network. Paid content services (subscription to music or video services) are different from zero rated services, as access to the entire internet remains uncompromised at all times.

My name:
Oskar Lochschildt

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

The Regulation defines other "optimised" services (specialised services) as electronic communication services that cannot be offered over the best effort Internet and which require optimisation. E.g. e-health or connected car applications that require a stable and fast connection that cannot be assured over the Internet in order to function safely. However, they cannot replace Internet Access Services, but must be offered as an "extra" in addition to Internet access service. I understand that Internet access service is a publicly available electronic communications service that provides access to the Internet, and thereby connectivity to virtually all end points of the Internet, irrespective of the network technology and terminal equipment used." It is crucial that services that could be offered on the open, competitive internet are not re-categorised as "specialised services" for anti-competitive reasons.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to

particular services like e-health or connected cars)?

There seems to be a theoretical demand, from part of providers, for specialised services that may be offered in the future. Commissioner Oettinger confirmed in the Parliamentary questions of 10th of June 2015 that he cannot name any existing specialised service that would be damaged by net neutrality. Specialised services should must not include regular content and applications readily available - or capable of being made readily available - across the Internet. It is especially important that content and applications that are available over the Internet access service are not recategorised - as this would result in the exact opposite of net neutrality.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

While the provision of specialised services is allowed under the Regulation, they cannot be offered as a replacement for Internet access services. In its 2012 guidelines, BEREC stated that price discrimination practices offering access to a limited part of the Internet would have a negative effect on consumers' rights. Any regulation of specialised services" which would allow a discriminatory "fast lane" for services that could otherwise be provided on the open Internet must be avoided, in order to protect freedom of communication, competition and innovation.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Any commercial practices which limit the users' rights to free expression and freedom of communication, i.e. my rights, are contrary to the object and purpose of the Regulation. The Regulation aims to safeguard open internet access; commercial practices therefore cannot restrict free choice by prioritising a service or application over another. If a commercial practice creates disadvantageous conditions then it is not only a violation of the user's rights, but also of the core principles of economic competition.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

The Regulation prohibits specific traffic monitoring. Practices such as deep packet inspection (DPI) undermine my very own right to privacy and go against EU data protection and privacy rules. In fact, some experts argue that DPI is an invasive surveillance and censorship technology.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

The EU Regulation requires Internet service providers to treat all traffic equally. There is however uncertainty about "special categories" of traffic. Categories of traffic is a group of individual content,

applications or services that share some common characteristics. For example, a category could be based on the type of applications, e.g. all e-mail applications or all online telephony applications or technical characteristics of the applications, eg. all delay-sensitive applications. Therefore, an ISP would discriminate against a specific category of applications if it treated all e-mail applications differently from other kinds of applications, or if it treated all delay-sensitive applications differently from applications that are not sensitive to delay. The Regulation says that the objective of reasonable traffic management is to contribute to an "efficient use of network resources and to an optimisation of overall transmission quality", without the use of commercial criteria. If not properly clarified by regulators, providers could use this potential loophole to apply disguised commercial criteria to arbitrarily classify certain categories of traffic, in order to prioritise one category over another. Class-based management distinguishes between categories of applications. One well-known example of this is the restriction of peer-to-peer file sharing traffic in response to alleged network congestion. The arbitrary classification of certain categories of traffic is a discrimination that would undermine net neutrality to the detriment of free speech, innovation and openness.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

Reasonable Traffic management allows ISPs to manage traffic on their networks. To do so, ISP can give priority to certain communications or slow down some others. Under the Regulation, this practice is allowed if it is reasonable, transparent, non discriminatory and proportionate. Traffic management must be temporary and, therefore, not a standard part of network configuration. Also, as general rule, traffic management shall treat all applications equally, and only under very limited circumstances it may differentiate among categories of traffic. Traffic management should not impede user choice. Quality and speed should remain consistent regardless of the type of content being accessed. ISPs cannot manage traffic in a way which would block, alter, slow or throttle access to any specific application, service or content. In short, discrimination should not be allowed.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

BEREC's 2012 guidelines said that any deviation beyond reasonable traffic management is equivalent as having "restricted access to the Internet".

If companies interfere and restrict or limit access to specific points on the Internet, this will have an obvious impact on our freedom of choice and access to information. The Regulation clearly states that traffic management must be reasonable and only last as long as necessary. If congestion is sudden and temporary, traffic management can take place, but it must remain application-agnostic. If congestion is recurring, the operator should enhance its network capacity and must not rely on this exception.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

BEREC should require ISPs to use a common terminology in order to foster transparency about how traffic on their networks is managed. My ISP should tell me concrete examples on how it manages traffic and provide information about how their traffic management practices are limited in time and scope and executed on a necessary and proportionate basis. Technical or legal jargon used in contracts must be avoided to ensure clarity. However, discriminatory behaviour does not become less discriminatory simply because the provider is 'transparent' about it in the consumer contract. Transparency is only one of the criteria needed to ensure that I can enjoy an unfettered access to the internet and that I am not misled by my ISP.

What information would you like to receive about the speed of your Internet connection?

ISPs should tell me the average available speed of their connection with a specification of the maximum and minimum speed in a user-friendly way, for example via a diagram or image. This means that my Internet provider should not be allowed to display the maximum possible speed as being generally available, as this would be misleading about the actual speed that is normally available.

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

ISPs should provide information on quality of services parameters in very clear language in all contracts. Concrete examples should be provided to help me understand the practical impact on my Internet access service, which I understand, is a publicly available electronic communications service that provides access to the Internet, and thereby connectivity to virtually all end points of the Internet, irrespective of the network technology and terminal equipment used. For instance, I should be provided information regarding possible issues arising when I use VoIP applications, such as videos delays or sounds effects. Basically, I should have the information I need in order to make reasonable assumptions about the quality of the service available for my particular priorities (gaming, video, etc)

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that

ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole. If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users'

rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Kind regards,
A concerned Citizen
Martin Lochschmidt

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 25 June 2016 22:58:21

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Robert Wilson Thomas/Wilson Thomas Limited, Ireland

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised

services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of

authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Please treat this comment confidentially and don't publish it.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 17 June 2016 12:27:12
Attachments: [Benno Savioli.vcf](#)

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term “commercial practices”? Do you think there is a demand for “commercial practices” such as zero-rating, from the end users’ point of view?

I can imagine that some might want to have such zero-rating for getting fast-lane downloads (streaming services combined with content-provider flat-rates). But actually, I consider this as merely giving priority to downloading band-width-demanding multi-media content over other - non-commercial information access and exchange. For me, the internet and the infrastructure once has been build on public infrastructure - and like public streets in my view are needed to be accessible without extra payment for the 'fast-lane' the net should also remain open and accessible

My name/organisation:
Benno Savioli

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

considering the currently completely undefined nature of such services, I rate the inclusion of a respective 'pre-cautionary clause' as a backdoor intended to circumvent existing regulations

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

No way - considering the problems in controlling the content-readers and the way they make use of privacy data, this kind of investigating content should remain strictly limited to cases where crime might be involved and a specific permit by a judge is required

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?

Regarding delay sensitiveness, this should be more clearly defined and demarcated. Considering for instance a video download for entertainment, it might be inconvenient to need a buffer-storage for non-interrupted video, but this is nothing I considered problematic. Different from that, video-based medical surgery with remote assistance requires 'real-time' transmission at maximum speed. Therefore, the type of content is not crucial but the purpose of transmission.

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?

cf. my answer to the previous question. Type of content (video for instance) is not the core-issue in my view but the purpose of transmission (on-line supported medical treatment, for instance). Therefore, I can see a need to prioritising - in certain limitations that need specification - purpose that is in general public interest

What information would you like to receive about the speed of your Internet connection? information that allows me to estimate the Speed-package offered compared to my typical use-cases. That should not be difficult, in particular not when it is about 'upgrading' the contract to other conditions - as then they have enough of my history-data to provide me a clear view

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but

need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users." Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet. It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. ♦ Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation".

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 17 June 2016 10:53:03

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name:
Eduardo Fernández Martín

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

i think there is no demand.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?
no, in any case

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of online traffic (video, P2P, etc)?
they must treat all traffic as equal

Would your freedom be limited if ISPs discriminated between online content based on their technical requirements like time sensitivity?
yes

What information would you like to receive about the speed of your Internet connection?
I must be informed with all the data about my connection, user-friendly and not user-friendly for those who knows about that.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the

optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the

minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to “guarantee the continued functioning of the Internet ecosystem as an engine of innovation”. BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy. Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to

distinguish reasonable and unreasonable forms of traffic management measures. Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 16 June 2016 21:13:01

Dear Sir or Madam,

please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:

Manfred Mendl

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and that protects the Internet as an engine for innovation. The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge online services for preferential treatment, they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines.

Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6. July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users." Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights protected under Article

3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation. Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation". BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated. (see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example. Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied

and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself.

Transparency has limited scope in fixing problems, particularly in this context.

Subject: Stakeholder comment regarding the BEREC net neutrality guidelines
Date: 16 June 2016 01:24:30

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

What is your understanding of the term "commercial practices"? Do you think there is a demand for "commercial practices" such as zero-rating, from the end users' point of view?

There is no justified room for any commercial practices regarding the restriction of access to content (or its provision). Zero-rating is the entry door for censoring as well as for the subsequent additional commercialisation of access after all ("Pay-to-access" that website ... "Pay-to-publish" your content ... and so on).

My name/organisation:
Alexander G. Schlegel MSc/LLB

What other "specialised" or "optimised" services (that can be give specific additional characteristics like speed or reliability) in addition to Internet access, can be offered by Internet access providers? What are the characteristics of such services that would justify the fact that they are not offered over the internet?

NONE. What is defined as 'optimised' or 'specialised' are in fact parallel and different "services" as they serve completely different purposes and enterprises, namely the remote operation of machines.

Therefore, such 'services' should be required (and regulated) to run on different platforms (e.g. band-width, frequencies) provided by - even legally - separate entities.

Is there a demand for specialised services (i.e. services offered in addition to internet access that provide optimised connections to particular services like e-health or connected cars)?

Currently, no. If so (in an unforeseeable future) such 'services' may be provided on different platforms each by specialised providers for such - anyway - completely different purposes and businesses (end users). Driving a car or removing organs remotely has nothing do to with the free internet as it is and should not interfere with my internet access in any way.

Using the same transmission technology for signals does not justify future restrictions on the services there are now and their regulations.

What could be the positive and negative impacts of specialised services on future innovation and openness of the Internet?

Safety, security, reliability, performance and legal liability concerns on all sides if everything runs on the same net.

Who wants something "Special" should build his/her own and not

restrict the open Internet as it is.

Do you think that commercial practices could limit your rights as an end user? Could you provide examples?

Of course they could and are invented for such purposes, see above.

Should the ISP be allowed to monitor the traffic of their users, including the content of the traffic (e.g. through deep packet inspection) for the purpose of traffic management?

Not at all. Moreover, this 'purpose' has to be banned also.

How much should your ISP be able to interfere with your internet connection - for example to prioritise or de-prioritise certain types of on-line traffic (video, P2P, etc)?

Basically, ZERO.

Justified are only general limitations concerning the terms of service (e.g. speed or data limits), regarding the package I bought.

Would your freedom be limited if ISPs discriminated between on-lineonline content based on their technical requirements like time sensy?

YES, time is no argument in this environment unless there is a technical breakdown where human service is needed.

What would you consider to be "reasonable" traffic management measures? How can "unreasonable" traffic management measures affect you as a user? Please, provide examples.

NONE with the exception of the terms of service, see above.

Unreasonable is not to provide what is already paid for under the disguise of traffic management requirements.

What information would you need to make an informed decision about your Internet connection? For example: traffic management. commercial practices or technical conditions?

All of the above is true. However, "requirements" are nice on paper and the regular 'end-user' has other things to do but to monitor his ISP ('s behavior) or to argue with the ISP without a standardised recourse mechanism (like e.g. in travel regulations for delays in air or train services).

So, what is missing is a requirement for WARRANTIES based on defined and up-to-date technical standards and a financial recourse (claim) regulation for the consumer in case these standards are not kept by the ISP.

What information would you like to receive about the speed of your Internet connection?

Speed is the obvious and most common problem apart from, at times, fully down connections.

If you sign a contract for e.g. 100 MB/sec you'll get an average 75 MB at best and sometimes only 10 MB. All for so-called technical reasons (excuses). If your connection is fully down for hours or even days for

so-called maintenance or other "technical" reasons you'll get an excuse at best.

This relates to the question above as a common practice by ISPs. As long as these are not required to guarantee the services and performance they promoted AND to compensate the consumer (under a standard claim mechanism) if they fail in their obligations nothing will change.

E.g., if my monthly subscription is for 100 MB/sec and I had only an average speed of 50 MB/sec the discount on the next monthly subscription fee shall be 50 percent (and so on).

Regarding that, there is actually no "technical" excuse for ISPs. They are perfectly able to monitor what they deliver and are doing that anyway. Furthermore, they are (and must be) technically able to ensure a specific performance, namely what is contractually agreed upon. So, to continue with the example, the one who cannot deliver the 100 MB/sec he promoted and signed on should only offer the speed he can deliver and guarantee in the first place to avoid any "fines".

How should ISPs describe other parameters of their Internet access offers, such as quality of service parameters (typically latency, jitter, packet loss) and quality as perceived by end users? Should these parameters be defined in the contract? If so, how?

As above. General minimum QoS standards should be defined as state-of-the-art in the EU Regulation which are to be guaranteed.

[NN#1v2]

The diversity and innovative capacity of the Internet comes from the low cost of innovation and low barriers to entry. These principles ensure that every established business, start-up or non-commercial service—regardless of their size—has an equal opportunity to communicate with a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the on-line economy can only be ensured by an open, neutral and non-discriminatory Internet. When internet providers are allowed to interfere with the decisions of their customers by economic or technical discrimination, this freedom is lost. Recital 1 of the EU Regulation on net neutrality says that legislation has to be interpreted in a way that ensures our freedom to access and distribute information and protects the Internet as an engine for innovation.

The current BEREC guidelines create a solid foundation for the protection of these principles. The enormous task BEREC was left with by the legislator has been fulfilled in a balanced and careful manner that ensures the protection of the rights of consumers and businesses guaranteed by the regulation. The guidelines provide much needed clarification to the text, but need to be further specified in a few points.

[SpS#1v2]

The EU Regulation on net neutrality allows specialised services ("services other than internet access services") under strict safeguards. Article 3(5) and Recital 16 require the optimisation of specialised services to be objectively necessary for the functionality of key features

of the service. This would not be the case with services that could also function on the open, best-effort Internet. Furthermore, Recital 16 prevents specialised services from being used to circumvent general net neutrality traffic management rules. Any deviation from these safeguards that would widen the applicability of the concept of specialised services would increase market entry barriers and thus weaken the innovative potential of the Internet as a whole.

If ISPs are allowed to charge on-line services for preferential treatment they have an incentive to stop investing in network capacity for the "normal" Internet and reduce their data caps, in order to encourage their customers to use specialised services. This effect would be detrimental for minorities, disadvantaged people, not-for-profit services and start-ups that cannot afford special access to all networks. This would also be detrimental to the development of the free, open and innovative Internet ecosystem.

[SpS#2v2]

Specialised services allowed under the EU Regulation must come with their own capacity, separate from the Internet access service. They cannot undercut the average maximum bandwidth that the EU Regulation guarantees.

Paragraph 118 of the draft BEREC guidelines suggests that the delivery of specialised services could limit an individual end-user's Internet access service capacity. This is not in line with Article 3(5) of the EU Regulation. It also contradicts the requirements for the provision of specialised services in paragraphs 113 and 117 of the draft guidelines. Furthermore, the legislator clearly established its intention to ensure that end-user's Internet access service capacity remains unaffected by the delivery of specialised services by modifying the wording accordingly during the negotiations. In these final negotiations on 6 July 2015, the legislator decided to delete the word "other" before "end-users" in Article 3(5). That final version of that article now establishes that specialised services cannot be usable or offered to the "detriment of the availability or general quality of Internet access services for end-users."

Finally, paragraph 118 of the draft guidelines is not in line with Article 4(1)(d) of the Regulation (on transparency) nor with paragraphs 142 and 144 of the draft guidelines, as the average and maximum bandwidth agreed between the ISP and the end-user are no longer met.

[ZR#1v2]

"Zero-rating" is a commercial practice imposed by internet providers. It allows unlimited access to certain sites and services, but imposes a payment for accessing the rest of the internet.

It is good that there are a number of clear restrictions on zero-rating in BEREC's draft guidelines. However, if most of the current forms of zero-rating are going to be banned or severely restricted, why not ban zero-rating altogether? That would cut five pages from the guidelines and make the job simpler for the National Regulatory Authorities whose job it is to implement the guidelines.

There are forms of commercial practices that interfere with users' rights

protected under Article 3(1) of the EU Regulation to access and, in particular, to distribute information freely. When a commercial practice of an ISP discriminates between providers of content, applications and services by making them unequally accessible (for example, if you have to pay to access some sites/services, but get "free" access to others), this constitutes an arbitrary interference of users' rights established under Article 3(1) of the Regulation and should be prohibited according to Article 3(2).

Recital 7 of the Regulation defines the types of commercial practices that require national regulators to intervene. However, the language of this recital that "National regulatory and other competent authorities should be empowered to intervene" and "should be required, as part of their monitoring and enforcement function, to intervene" only provides the minimum floor for regulatory intervention and not a maximum ceiling of the scope of this regulation. National Regulatory Authorities have a strict mandate to implement the restriction on harmful commercial practices of Article 3(2) of the Regulation. This means that a slower (and resource-intensive) case-by-case approach is not an appropriate implementation of the legislation.

Application-specific zero-rating (i.e. zero-rating of individual applications or whole classes of applications) and zero-rating for a fee (i.e. where application providers pay to have their data zero-rated) are commercial practices that systematically—regardless of their scale and the market position of the players involved—interfere with the end-users' right of Article 3(1) to impart information, and therefore materially reduce end-users' choice in practice. If people have to pay to access YOUR information and get access to other information for free, this is quite obviously a restriction on the right to distribute information, as described in Recital 1 of the legislation. It is logical, therefore that such practices be banned under the provisions of Article 3(2).

In addition, National Regulatory Authorities have to ensure clarity and predictability of authorised business models in the digital single market to fulfil the goal of this Regulation to "guarantee the continued functioning of the Internet ecosystem as an engine of innovation".

BEREC's mandate pursuant to Article 5(3) of the EU Regulation is to contribute to the "consistent application of this Regulation" by issuing clear rules. A case-by-case approach falls short, since the legality of each zero-rating offer will have to be assessed individually by 31 enforcement bodies and radically different patterns of what is permitted and prohibited in each country will accumulate over time, as a direct result of these case-by-case decisions. This legal uncertainty discourages long-term planning and innovation, and is therefore detrimental to investment in the European start-up economy.

Finally, most of the commercial practices highlighted by BEREC have a harmful effect on the fundamental rights of end-users protected under the Charter of Fundamental Rights of the European Union. By making certain services unequally accessible, zero-rating infringes on the media freedom and pluralism (Article 11(2) of the Charter). Zero-rating also constitutes a discrimination against the right to provide services in EU Member states and the freedom to conduct a business for every competitor of the services or applications that are being zero-rated.

(see Articles 15(2)), and 16 of the Charter of Fundamental Rights).

[TM#1v2v2]

The EU Regulation has very clear rules on what constitutes reasonable traffic management. According to its Article 3(3), all traffic management should be as application agnostic as possible. Every deviation from this rule, such as class-based traffic management, could harm competition by offering priority to some classes of applications, but not others, for example.

Class-based traffic management also harms applications and services that are misclassified, whether deliberately or not. This is a particular risk for traffic from small businesses or start-ups. Class-based traffic management also risks discriminating against encrypted and anonymised traffic, which could be throttled by ISPs. It also harms users whose needs for accessing a certain class of service differ from the ISPs' assumptions. Finally, the lack of transparency around this practice creates uncertainty about the performance of particular applications in any particular network. As with zero-rating, the complexity and ambiguity of this approach makes it more difficult for regulators to enforce it. Therefore, applying class-based traffic management instead of application agnostic traffic management is unnecessary, disproportionate, discriminatory and hinders transparency.

In light of these harms, paragraphs 54, 55, 57 and 63 of the draft guidelines are not yet fully in line with the EU Regulation. Article 3(3) subparagraph 2 clearly requires traffic management to be transparent, non-discriminatory and proportionate, in order to be deemed reasonable. Those conditions have to be read in the context of Article 3, to distinguish reasonable and unreasonable forms of traffic management measures.

Paragraph 63 of BEREC's draft guidelines interpret "reasonable traffic management" which is inconsistent with the legislator's intentions. The draft guidelines would allow far too broad class-based traffic management measures. These would be based on the functionality of the service and protocol used, but it seems clear from recital 9 and the structure of Article 3(3) of the Regulation that the legislator only intended "reasonable measures" to be based on the Quality of Service requirements of traffic (classes for sensitivity to latency, jitter, packet loss and bandwidth).

According to the proportionality principle and paragraph 58 of the draft guidelines, all forms of user-controlled quality of service and consumption based traffic management should be applied and exhausted before more intrusive measures are taken. Therefore, BEREC should bring paragraphs 54, 55, 57 and 63 more clearly into line with the EU Regulation.

Transparency cannot, as proposed by the Commission in its initial draft of the Regulation and subsequently rejected, be considered an antidote to anti-competitive behaviour in itself. Transparency has limited scope in fixing problems, particularly in this context.

Dear Sir or Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

My name/organisation:
Walter Karnthaler

The diversity and innovative capacity of the Internet ecosystem is built upon the low cost of innovation and low barriers to market entry. These principles ensure that from day one, every enterprise, startup or non-commercial service – no matter how small or well funded – has the potential to reach a global audience in a manner equal to their competitors. This driving force for the prosperity and diversity of the online economy is only ensured by an open, neutral and non-discriminatory Internet. When ISPs are allowed to interfere with the decisions of their customers by economic or technical discrimination, this essential freedom is lost. According to Recital 1 of the Regulation on net neutrality, the legislation has to be interpreted in light of these goals.

Kind regards,
A concerned citizen

Dear Sir / Madam,

Please take this Stakeholder comment regarding the BEREC net neutrality guidelines creation into consideration.

- Net neutrality rules protect all of us from a corporate takeover of the Internet, as they foster diversity, equality, competition and innovation.
- If we allow 'fast lanes' for the highest bidder, everyone else will end up in a 'slow lane'. This discrimination would make it harder for independent media, start-ups and citizen movements like us to survive next to dominant players like Google and Facebook.
- I urge you to close all loopholes in the current proposals that would allow service providers to prioritise certain content and act as gatekeepers, through preferential treatment, "zero-rating" or class-based traffic management.
- In Brazil, the US and India, regulators have adopted strong net neutrality rules after an overwhelming response from ordinary citizens to their consultations. Now it's Europe's turn to protect an open and democratic Internet.

For this reason, I urge you to amend the current draft guidelines according to the following policy analysis:
