Subject: Public consultation on draft BEREC Guidelines on common approaches to the identification of the network termination point in different network topologies
Attachments: signature.asc

Dear Madam / Sir,

I would like to weigh in on the current discussion on network termination points.

The viewpoint of the FSFE can be found here:
<https://download.fsfe.org/policy/routers/20191121-BEREC-Guidelines-Consultation.pdf>

I want to express my support of this point of view. Especially the part about security problems seems important to me since I do IT Security for a living. I'm currently running a setup much more complex than the average end user's. I'd like to keep it that way.

Please do not kill router freedom.

Thank you.

Sincerely yours
