Hi,

please focus on end users perspective and make point A the location of the NTP.

Every other NTP location than point A would seriously tamper the freedom of choice, a fair market competition & innovation and technical security.

The experiences in Germany after the legal clarification to set point A as NTP in 8/2016 are quite positive: the devices chosen by end users do not cause any technological damages, e.g. for ISPs.

Bottomline establish and protect Router Freedom in Europe and make point A the location of the NTP!

Regards!
