Draft BEREC Report on empowering end-users through environmental transparency on digital products

Contribution by Rosendo Mañas, Partner at Resilio

2) Please enter your comments on Chapter 2 (Key concepts on empowering end-users through environmental information on digital products) here:

2.1.2 the mentioned initiatives like the ESPR, the Green Claims, DPP or the EU Ecolabels dont necessary include the environmental impacts under the PEF method. However, this should of be of capital importance as stated in section 2.1.1; the market will be driven by environmental criteria when the available data is coherent, comparable and relies on serious metrics.

In the Focus on key concepts: #2 OBSOLESENCE; the RSS for laptops or the ESPR for smartphones don't include functionally obsolescence, with OS compatibility When said: "by providing versions of the service available on old devices, incorporating carbon footprint calculators in the user interface of the service", the BEREC could try to push toward multicriteria, and not only carbon calculators, aligning with PEF methodology.

3) Please enter your comments on Chapter 3 (Summary of BEREC Workshop on End-Users' Empowerment through environmental transparency on digital goods and services) here:

As I was the consultant from Resilio in the workshop, we have no comments on the messages transmitted, they reflect accurately what was discussed in the meeting.

4) Please enter your comments on Chapter 4 (Existing national initiatives in the Member States) here:

In mid-February, a study on the environmental impact of the internet in France conducted with the major Telecom operators will be published. The checklist so that other European operators is already available. It could be noted that such work could be replicated to other countries without exposing and comparing the environmental impact of different Telecom Operators.

6) Please enter any other comments you may have:

We see that other regions (like the US or China) are starting to enter the Green IT field, writing standards, and developing their methods. If the BEREC wants the EU methods to become international standards, action should be taken soon with these other bodies to ensure the compatibility of such.
