Subject: BEREC Opinion on the national implementation and functioning of the general authorisation, and on their impact on the functioning of the internal market
Date: Monday, July 15, 2024 12:27:57 PM

On the behalf of the General Director below you will find:

Various regulations leave two different fronts, one more administrative within which to obtain a general authorization as an operator and another related to the recognition of a communication operator. These two fronts are not always aligned. A significant simplification would be to consolidate the general authorization and the communication operator recognition into a single, easily accessible, and European registry. This would allow anyone to immediately see the authorization level of the correspondent and, ideally, also its effectiveness. The more frequently this information is updated, for example on a monthly basis, the more it ensures the functional veracity of the interlocutor.

In this regard, it is suggested to:

1.
Unify the national registries,
2.
Update them at least monthly and publish them in a single, easily accessible European registry, similar to the work done with the EORI system.

Best regards
